

PLWM-MCC Full System Staff Manual

Public Website, Management System, Member Portal, Roles, Pages, Workflows, and Good-Use Rules

Prepared for church staff, leaders, members, and authorized support users

Purpose of this handbook

This document explains what each part of the system is for, who can use it, and how common church workflows should be handled without exposing sensitive records.

How to Use This Manual

This manual is written for non-technical users first. It explains what each page is for, which roles should use it, what actions are normally allowed, and what to do when something does not look right.

- Start with System Overview if you are new to the system.
- Use Role Summary to understand what each type of account can access.
- Use the page guides when you need to know what a screen is for.
- Use the workflow checklists when training a staff member or leader.
- Use Support and Troubleshooting before reporting a system issue.

Table of Contents

Section	What it covers
How to Use This Manual	Purpose, privacy reminders, and navigation guidance.
System Overview	Public website, management system, and member portal.
Role Summary	Role purpose, scope, and access expectations.
Role and Page Matrix	Quick view of visible areas and write limits.
Public Website Guide	Public pages available without login.
Sign-In and Account Access	Login, password, reset, and unauthorized flows.
Management System Pages	Daily operations, groups, ministry, attendance, events, finance, inventory, archives, audit, and settings.
Member Portal Guide	Member-only features and privacy rules.
Role Guides	Role-specific duties, restrictions, common mistakes, and routines.
Workflow Checklists	Step-by-step operating checklists for common staff tasks.
Safety, Privacy, and Good Use	Sensitive record handling rules.
Support and Troubleshooting	What to check and what to report.
Glossary	Plain-language definitions.
Source and Verification Note	Documentation basis and validation limits.

Privacy reminder

Do not add real credentials, private member data, finance details, or demo passwords into shared documentation or chat messages.

System Overview

PLWM-MCC has three main system areas: a public website, a protected management system, and a member portal.

Area	Who uses it	Purpose
Public Website	Visitors, members, and the public	Shares church information, Bible seminar pages, sermons, world mission pages, introduction pages, and church identity information.
Management System	Authorized staff, pastors, and leaders	Supports church operations such as members, users, groups, ministry, services, attendance, events, finance, inventory, archives, notifications, and settings.
Member Portal	Church members with login accounts	Lets members view their own profile, giving, attendance, service responses, event registrations, and ministry invitations.

Access rule

A user should only see pages and actions that match their role and assigned scope. Hiding a button is helpful, but backend permissions are still the final guard.

The system separates what a person can see from what a person can change. A Pastor may read broad church information but should not manage event creation. A Finance Team user may need member lookup for giving records but should not manage unrelated ministry rosters.

Role Summary

Each role has a clear operating purpose. Leader roles may be scoped to one ministry, one cell group, or one member group.

Role	Purpose	Typical scope
System Admin	Maintains the whole system, user access, settings, and system-level records.	All management pages and system configuration.
Pastor	Reviews broad church information for pastoral oversight and decision support.	Read-heavy access to church records and pastor-level archives.
Registration Team	Handles member registration, user account support, events, services, and attendance operations.	Operational data entry and review.
Finance Team	Records and reviews giving or finance-related information.	Finance, member lookup needed for finance work, archives, and personal settings.
Ministry Leader	Coordinates one assigned ministry roster and ministry event involvement.	Own ministry only.
Cell Group Leader	Coordinates one assigned cell group and attendance tasks.	Own cell group only.
Group Leader	Coordinates one assigned demographic or ministry group such as YA, Men, or Women.	Own group only.
Member	Uses the member portal for personal church records and responses.	Own member record only.

Unassign does not mean delete

When a scoped leader removes a person from a ministry, cell group, or group roster, it means unassign from that roster only. The member record should not be deleted.

Role and Page Matrix

This matrix is a quick guide. Exact buttons still depend on permissions and assigned leader scope.

Role	Visible management areas	Write or update limits
System Admin	Dashboard, Members, Cell Groups, Ministry, Users, Attendance, Services, Events, Finance, Inventory, Archives, Audit Logs, Settings, My Settings	Full trusted maintenance access.
Pastor	Dashboard, Members, Events, Archives, and other allowed read views	Events are read-only. Should not create, complete, cancel, or delete events.
Registration Team	Dashboard, Members, Users, Attendance, Services, Events, Archives, Ministry support, My Settings	Operational changes only. Should verify member data before saving.
Finance Team	Dashboard, Members, Finance, Archives, My Settings	No Ministry page access. Finance data is sensitive and should be handled only by authorized users.
Ministry Leader	Dashboard, Ministry, Attendance, Events, Inventory, Archives, My Settings	Manage own ministry roster and invites only. Inventory is view/request only. Archives show public and restricted files.
Cell Group Leader	Dashboard, Cell Groups, Attendance, Events, Inventory, Archives, My Settings	Manage own cell group members only. Attendance work is scoped. Inventory is view/request only.
Group Leader	Dashboard, Members, Attendance, Services, Events, Inventory, Archives, My Settings	Manage assigned group members only. Services and events are read-only. Inventory is view/request only.
Member	Member Portal and Portal Settings	Own profile, own giving history, own attendance history, own registrations, own service responses, own ministry invitations.

When access looks wrong

Log out and log back in first. Permissions are often loaded during login. If the page still appears wrong, report the account email, role, expected page, and current page shown.

Public Website Guide

These pages do not require login. They are for visitors, members, and public information sharing.

Page	Route	Purpose	Good-use note
Home	/	Main public landing page.	Use for general church presence and visitor orientation.
Bible Seminar	/bible-seminar	Introduces Bible seminar participation.	Keep wording clear for people who are new to church programs.
Bible Seminar for Adults	/bible-seminar/adults	Shows adult seminar details.	Use age-appropriate and audience-friendly language.
Bible Seminar Schedule	/bible-seminar/schedule	Shows seminar schedule information.	Confirm dates and times before publishing.
Sermon	/sermon	Sermon landing page.	Use as the public entry point for sermon content.
Latest Sermon	/sermon/latest	Highlights current sermon content.	Make sure the latest item is actually current.
Sunday Sermon	/sermon/sunday	Sunday sermon content.	Use for regular Sunday teaching materials.
Christian Life	/sermon/christian-life	Christian life sermon or teaching content.	Keep wording pastoral and easy to understand.
World Mission	/world-mission	World mission information.	Use for mission context and updates.
Mission Status	/world-mission/status	Mission status information.	Review status wording before public sharing.
Introduction	/introduction	Church introduction page.	Use for identity, welcome, and basic orientation.
What We Believe	/introduction/beliefs	Beliefs page.	Keep statements accurate and approved.
Church Identity	/introduction/ci	Church identity page.	Use consistent naming and branding.

Public pages should not expose private member lists, giving records, private phone numbers, account emails, internal archive documents, or private event notes. If a public page looks outdated, report the specific route and the exact text that needs review.

Sign-In and Account Access

These pages control how users enter the protected management system or member portal.

Login

Purpose	Use this page when	Main work	Important limits
Lets authorized users sign in with their account credentials.	A staff member, leader, or member needs to enter the system.	Enter email and password, then follow any forced password change prompts.	Do not share credentials. Do not reuse another user account.

Forgot Password

Purpose	Use this page when	Main work	Important limits
Starts the password reset process.	A user cannot remember their password.	Submit the account email and follow reset instructions.	Only use for the correct owner of the account.

Reset Password

Purpose	Use this page when	Main work	Important limits
Lets a user set a new password after a reset request.	A reset link or reset flow is active.	Enter the new password and confirm it.	Use a strong password and do not send it through chat.

Force Change Password

Purpose	Use this page when	Main work	Important limits
Requires a user to change a temporary or reset password before continuing.	The system redirects a user after login.	Create a private password before entering protected pages.	If stuck, ask an authorized admin or registration account manager for help.

Unauthorized page

If a user lands on Unauthorized, the account is signed in but does not have permission for that page or action. Log out and back in first, then report the role and page if it still happens.

Management System Pages: Daily Operations

These pages are protected. The exact actions available depend on role permissions and assigned scope.

Dashboard

Purpose	Use this page when	Main work	Important limits
Shows role-specific overview, counts, alerts, and next actions.	You need a quick picture of current church operations.	Review metrics, alerts, recent activity, and role-specific panels.	Do not assume dashboard totals prove private data correctness without checking source records.

Members

Purpose	Use this page when	Main work	Important limits
Manages member directory, profiles, assignments, and member records.	A member needs to be added, reviewed, assigned, updated, or searched.	Search first, create or edit records, view profile, and manage assignments if allowed.	Leader roles only see or manage members inside their allowed scope. Avoid duplicates.

Member Profile

Purpose	Use this page when	Main work	Important limits
Shows a member-specific record view.	You need details for one member.	Review contact details, group/cell group/ministry context, attendance, giving visibility, and notes according to permission.	Private member data must not be copied into public documents or chats.

Member Form

Purpose	Use this page when	Main work	Important limits
Creates or edits member information.	A new member is being registered or an existing member needs correction.	Enter identity, contact, dates, status, group, cell group, and other profile fields.	Save only confirmed information. Avoid guessing birthdates, phone numbers, or assignments.

Users

Purpose	Use this page when	Main work	Important limits
Manages login accounts and role assignment.	Someone needs account access or a role change.	Create users, set active status, connect member profiles, assign roles, and set leader scope.	Roles control access. Do not grant higher access just to fix a one-time issue.

User Form

Purpose	Use this page when	Main work	Important limits
Creates or updates account details.	A login account is being created or maintained.	Select the correct role, link member profile when needed, and assign ministry, cell group, or group scope for leaders.	Clear incorrect leader scope when changing a role.

Management System Pages: Groups and Ministry

These pages organize people into church care and service structures.

Cell Groups

Purpose	Use this page when	Main work	Important limits
Shows cell group records and scoped cell group rosters.	A cell group needs review or a cell group leader is managing their members.	Review assigned cell group, search eligible members, add to own cell group, and unassign when needed.	Cell Group Leaders manage only their assigned cell group.

Ministry

Purpose	Use this page when	Main work	Important limits
Shows ministry roster and ministry event involvement.	A ministry leader needs to review or manage their own ministry members.	View roster, search unassigned ministry candidates, add members, unassign members, and manage event involvement if allowed.	Ministry Leaders do not delete member records. They only unassign from ministry.

Group Leader Members View

Purpose	Use this page when	Main work	Important limits
Shows assigned demographic or group members such as YA, Men, or Women.	A Group Leader needs to review or manage their group membership.	Search eligible unassigned members and assign only if they match group rules.	Group Leader access must follow the assigned group rule. For YA, age 18-29 inclusive is the locked rule.

My Settings

Purpose	Use this page when	Main work	Important limits
Lets logged-in users change personal display or account preferences.	A user needs personal settings or password changes.	Adjust display preferences and account-level settings that apply only to the current user.	Do not use My Settings to change another user account.

Leader scope rule

A Ministry Leader, Cell Group Leader, or Group Leader should not need broad member access to do scoped work. Their page should show the right roster directly.

Management System Pages: Services and Attendance

These pages support church service planning, responses, and attendance records.

Attendance Overview

Purpose	Use this page when	Main work	Important limits
Shows service attendance context and attendance tasks.	You need to review or record service attendance.	Open posted services, review attendance state, and record attendance if your role allows it.	Scoped leaders should only mark attendance for members in their own scope.

Service Attendance

Purpose	Use this page when	Main work	Important limits
Shows attendance entry for a specific service.	A service has opened for attendance checking.	Check members who attended, save attendance, and review the service attendance summary.	Do not mark attendance for people outside your assigned scope unless your role permits it.

Services

Purpose	Use this page when	Main work	Important limits
Shows church service schedule, capacity, status, and attendance connection.	You need to review services or maintain service records.	Create, update, publish, complete, or review services depending on permission.	Group Leaders and several leaders may be read-only. Do not change completed services unless authorized.

Service Responses

Purpose	Use this page when	Main work	Important limits
Tracks member responses such as attending, not attending, or undecided when enabled.	A service requires member response tracking.	Review response status and follow up when needed.	Response data should support planning, not public reporting.

Attendance correction rule

If attendance was recorded incorrectly, correct it only if your role is allowed. Otherwise report the service, member, and correction needed to an authorized user.

Management System Pages: Events and Ministry Invites

Events are posted by authorized roles and may include registrations and ministry involvement.

Events List

Purpose	Use this page when	Main work	Important limits
Shows event list, filters, status, registration context, and actions allowed by permission.	You need to review upcoming or completed events.	Read event details, filter events, create events if allowed, and open event details.	Pastor and several leader roles are read-only. They should not see create, update, cancel, complete, or delete controls.

Event Detail

Purpose	Use this page when	Main work	Important limits
Shows full event information and related participation context.	You need details for a specific event.	Review event details, registrations, capacity, attendees, and ministry involvement where available.	Only authorized roles should update event status or delete/cancel events.

Ministry Event Invites

Purpose	Use this page when	Main work	Important limits
Lets ministry-related participants be invited or assigned to posted events.	A ministry needs to support an event.	Ministry Leader can invite or assign members from their own ministry when permitted.	Do not invite members outside the assigned ministry scope.

Event Registration Review

Purpose	Use this page when	Main work	Important limits
Shows who is attending or registered when visible.	A staff member or leader needs event attendance context.	Review attendee lists and registration status.	Do not publish private attendee information outside the system.

Management System Pages: Finance and Inventory

Finance and inventory records require careful handling because they affect trust and accountability.

Finance

Purpose	Use this page when	Main work	Important limits
Records and reviews giving or finance-related information.	Finance Team or authorized users need to add, review, or reconcile finance records.	Search member, select category and method, enter amount/date/receipt, save, and review totals.	Finance data is sensitive. Do not share giving details with unauthorized users.

My Giving

Purpose	Use this page when	Main work	Important limits
Shows giving information visible to the current user when available.	A user needs to review personal giving history.	Review visible personal giving records.	This should not expose another member giving history.

Inventory

Purpose	Use this page when	Main work	Important limits
Shows item catalog, stock status, requests, usage, and inventory movements.	A user needs to find items, request items, or review stock.	Search inventory, submit requests if allowed, review low stock, and record usage if permitted.	Leader roles can view and request but should not create inventory records unless permitted.

Inventory Requests

Purpose	Use this page when	Main work	Important limits
Tracks pending, approved, rejected, or fulfilled item requests.	An item needs to be requested or a request needs review.	Submit a clear request reason and review status updates.	Requests should not bypass approval or stock tracking.

Finance correction rule

If a finance record is wrong, do not quietly overwrite it without authorization. Follow the approved correction process and keep enough notes for accountability.

Management System Pages: Archives, Audit, and Settings

These pages store documents, activity history, and system configuration.

Archives

Purpose	Use this page when	Main work	Important limits
Stores document records with categories, visibility, versions, approval status, and access logs.	A user needs to upload, review, approve, or find a church document.	Choose correct category and visibility, upload or review files, approve only if allowed, and respect visibility limits.	Public, restricted, and confidential visibility must be handled carefully. Leaders normally see public and restricted only.

Archive Versions

Purpose	Use this page when	Main work	Important limits
Tracks the current version and prior file history for archive records.	A document is updated or replaced.	Review current file metadata and version history where visible.	Do not replace important documents without confirmation.

Audit Logs

Purpose	Use this page when	Main work	Important limits
Shows system activity history for accountability and troubleshooting.	An admin needs to review who did what in the system.	Search or review activity records.	Use for accountability, not daily data entry. Access should be limited.

Settings

Purpose	Use this page when	Main work	Important limits
Controls system-level configuration.	A trusted admin needs to change operational settings.	Review and update settings only when the impact is understood.	Incorrect settings can affect many users. Change carefully.

Archive visibility reminder

Confidential files should never be marked public unless explicitly reviewed and approved. When unsure, choose the more restrictive visibility and ask.

Member Portal Guide

The member portal is intentionally simpler than the management system and should show only the logged-in member own data.

Portal feature	What members can do	Privacy rule
Profile	View personal member information and update allowed profile details.	Only the signed-in member own profile should be visible.
Attendance History	Review personal service attendance history.	Do not show another member attendance records.
Giving History	Review personal giving records visible to the member.	Giving information is sensitive and member-specific.
Event Registration	Register for published events and review participation.	Show only the member registration context.
Service RSVP	Respond to upcoming services when responses are open.	Responses should stay connected to the signed-in member.
Ministry Assignments	View and confirm ministry service assignments.	Assignments should be relevant to that member.
Ministry Invites	Respond to ministry event invitations.	Invites should be scoped to the member.
Portal Settings	Adjust personal portal preferences.	Settings affect only that account.

Member privacy rule

If a member sees another person information in the portal, treat it as a support issue immediately. Record the account email, time, page, and what was visible.

Role Guide: Admin, Pastor, Registration, Finance

Use this section when training a user on what their role is for and where they should be careful.

System Admin

Purpose	Visible pages	Main allowed work
Maintains the system, permissions, users, settings, audit history, and operational configuration.	All management pages.	Maintain records, assign roles, handle settings, review audit logs, and support users.

Restricted actions	Common mistakes to avoid	Good routine
Should not use broad access casually. Sensitive data must still be need-to-know.	Changing roles without assigning correct leader scope; changing settings without understanding impact.	Review alerts, maintain accounts, keep permissions tight, and document major changes.

Pastor

Purpose	Visible pages	Main allowed work
Reviews broad church information for pastoral oversight.	Dashboard, Members, Events, Archives, and other allowed read views.	Review members, events, archives, and high-level operational context.

Restricted actions	Common mistakes to avoid	Good routine
Events are read-only. Pastor should not create, cancel, complete, update, or delete events.	Using read access as if it were administrative authority; changing event state by mistake.	Review dashboards and reports, follow up with authorized operators for corrections.

Registration Team

Purpose	Visible pages	Main allowed work
Handles registration, member records, service and event operations, user account support, and attendance workflows.	Dashboard, Members, Users, Attendance, Services, Events, Archives, Ministry support, My Settings.	Create and update member records, support accounts, maintain services/events if permitted, and record attendance.

Restricted actions	Common mistakes to avoid	Good routine
Should not change finance records unless separately authorized.	Creating duplicate members; forgetting to link user account to member profile; wrong group or cell group assignment.	Search before creating, verify contact details, check assignments, and review saved records.

Finance Team

Purpose	Visible pages	Main allowed work
Records and reviews giving or finance-related information.	Dashboard, Members, Finance, Archives, My Settings.	Look up members for finance work, add/review giving records, review archives if allowed.

Restricted actions	Common mistakes to avoid	Good routine
No Ministry page access. Do not manage events, ministry rosters, users, or unrelated operations.	Sharing giving details, using member lookup for unrelated reasons, saving duplicate receipts.	Confirm member, category, amount, date, method, and receipt before saving.

Role Guide: Scoped Leaders and Members

Scoped leaders manage only their assigned area. Members use the member portal only.

Ministry Leader

Purpose	Visible pages	Main allowed work
Coordinates one assigned ministry roster and ministry event involvement.	Dashboard, Ministry, Attendance, Events, Inventory, Archives, My Settings.	View own ministry members, add unassigned members to ministry, unassign from ministry, read events, invite own ministry members to events if allowed.

Restricted actions	Common mistakes to avoid	Good routine
No member deletion. No unrelated ministry access. Inventory is view/request only. Archives are public and restricted only.	Searching for all members instead of assignable candidates; deleting instead of unassigning; inviting outside own ministry.	Review roster, respond to event needs, keep ministry member list clean.

Cell Group Leader

Purpose	Visible pages	Main allowed work
Coordinates one assigned cell group and attendance tasks.	Dashboard, Cell Groups, Attendance, Events, Inventory, Archives, My Settings.	View own CG members, add unassigned members to own CG, unassign from CG, mark attendance for own CG, read events.

Restricted actions	Common mistakes to avoid	Good routine
No broad member management. Inventory is view/request only. Archives are public and restricted only.	Marking attendance for non-CG members; assigning a member who already belongs to another CG.	Review member count, check attendance tasks, and follow up on event participation.

Group Leader

Purpose	Visible pages	Main allowed work
Coordinates one assigned member group such as YA, Men, or Women.	Dashboard, Members, Attendance, Services, Events, Inventory, Archives, My Settings.	View assigned group members, add only eligible unassigned members, unassign from group, read services/events/attendance.

Restricted actions	Common mistakes to avoid	Good routine
Services and events are read-only. Inventory is view/request only. Archives are public and restricted only.	Adding members outside group rules; trying to write to read-only pages; deleting member records.	Review group list, use filters carefully, report corrections to authorized staff.

Member

Purpose	Visible pages	Main allowed work
Uses the member portal for personal records and responses.	Member Portal and Portal Settings.	Review own profile, giving, attendance, service responses, event registrations, ministry assignments, and invites.

Restricted actions	Common mistakes to avoid	Good routine
No management system access. Cannot view other members private records.	Sharing password; assuming portal data is complete without reporting missing records.	Keep contact information current and respond to open service or event items.

Workflow Checklists: People and Accounts

Use these checklists for common staff work. Exact buttons may vary by role.

Add or Update a Member

- ☐ Open Members.
- ☐ Search first to avoid duplicates.
- ☐ Open existing profile if found or create a new member if allowed.
- ☐ Enter confirmed name, contact details, birthday, status, group, cell group, and ministry data.
- ☐ Save and review the profile after saving.
- ☐ If data is uncertain, leave a note or ask for confirmation rather than guessing.

Create or Maintain a User Account

- ☐ Open Users.
- ☐ Search by email, role, or linked member name.
- ☐ Choose the correct role.
- ☐ Link to a member profile when the account belongs to a member.
- ☐ Assign ministry, cell group, or group scope for leader accounts.
- ☐ Ask the user to log in and change temporary passwords when required.

Assign Groups, Cell Groups, Ministries, and Leader Scopes

- ☐ Confirm the person should belong to the selected group or roster.
- ☐ Check whether they already have an assignment.
- ☐ For group leaders, confirm the group rule such as YA age range.
- ☐ For cell group leaders, confirm the correct CG number.
- ☐ For ministry leaders, confirm the correct ministry.
- ☐ Use unassign rather than delete when removing from a roster.

Workflow Checklists: Services, Attendance, Events

These workflows affect participation records and should be handled carefully.

Record Service Attendance

- ☐ Open Attendance or the specific service attendance page.
- ☐ Choose the correct service.
- ☐ For scoped leaders, confirm only the assigned members are visible.
- ☐ Check the members who attended.
- ☐ Save attendance.
- ☐ Review the summary and correct mistakes only if authorized.

Review Services

- ☐ Open Services.
- ☐ Use filters or search if needed.
- ☐ Open the service to review details, status, capacity, and response deadline.
- ☐ Create or update only if your role has service write permission.
- ☐ Do not change completed service records without authorization.

Create or Review an Event

- ☐ Open Events.
- ☐ Review published event details and status.
- ☐ Create or update only if your role has event write permission.
- ☐ For Pastor and read-only roles, do not create, cancel, complete, update, or delete.
- ☐ Check registrations and ministry invites if available.

Workflow Checklists: Rosters, Finance, Inventory, Archives

These workflows often involve sensitive or accountable records.

Manage a Ministry Roster

- ☐ Open Ministry.
- ☐ Confirm the page title matches the assigned ministry.
- ☐ Review the ministry member list.
- ☐ Search for an unassigned member if adding someone.
- ☐ Add the member to the roster.
- ☐ Use unassign when removing from the roster. Do not delete the member record.

Manage a Cell Group Roster

- ☐ Open Cell Groups.
- ☐ Confirm the page title matches the assigned cell group.
- ☐ Review member count and member list.
- ☐ Search for members with no current cell group.
- ☐ Add the member when appropriate.
- ☐ Use unassign to remove from the cell group without deleting the member.

Record Finance Information

- ☐ Open Finance.
- ☐ Confirm the member and category.
- ☐ Enter amount, method, date, and receipt information.
- ☐ Save the record.
- ☐ Review totals and avoid duplicate receipts.
- ☐ Report corrections through the approved process.

Request or Review Inventory

- ☐ Open Inventory.
- ☐ Search or filter for the item.
- ☐ Check stock status before requesting.
- ☐ Submit a request with a clear reason if allowed.
- ☐ Review pending request status if authorized.
- ☐ Record usage only if your role permits it.

Upload or Review Archive Documents

- ☐ Open Archives.
- ☐ Choose the correct category and visibility.
- ☐ Upload or review the document according to permission.
- ☐ Approve only if authorized.
- ☐ Use restricted or confidential visibility when unsure.
- ☐ Never mark sensitive files public unless confirmed.

Safety, Privacy, and Good Use

The system contains church records that may be private, sensitive, or operationally important.

Area	Rule	Reason
Member records	Use member data only for church operations.	Personal contact and profile information should be protected.
Finance records	Share giving information only with authorized finance users.	Giving records are sensitive and trust-critical.
Archives	Choose the right visibility level: public, restricted, or confidential.	Wrong visibility can expose private documents.
Attendance	Record attendance only for the correct service and scope.	Attendance affects member history and reporting.
User accounts	Do not share passwords or use another user account.	Account activity is tied to individual accountability.
Public pages	Do not publish private operational data.	Public pages are visible without login.
Demo data	Use obvious demo markers and remove temporary data after testing.	Demo records should never be confused with real records.

Good support report

When reporting a problem, include the account email, role, page, action attempted, expected result, actual result, time, and any visible error message. Do not include passwords or private finance details.

Support and Troubleshooting

Use this section before escalating an issue. It helps separate access problems, data problems, and browser problems.

Problem	What to check first	What to report if unresolved
Cannot log in	Check email spelling, password, and reset flow.	Account email and exact error message.
Page is missing from sidebar	Log out/in to refresh permissions.	Account email, role, expected page, and current visible pages.
Unauthorized or 403 error	Confirm the role should have that page or action.	Route, role, action, and screenshot-free description of the error.
Wrong members visible	Confirm assigned ministry, cell group, or group scope.	Account email, expected scope, and example member names only if authorized.
Duplicate member appears	Search by name, phone, and email before editing.	Both profile IDs or names for merge/review by authorized staff.
Finance record concern	Do not edit unless authorized.	Receipt/reference, date, and correction request through approved channel.
Upload failed	Check file type, size, and internet connection.	Page, file type, size, and error message.
Email not received	Check spam, email spelling, and whether sending is enabled.	Recipient address and expected email type, without passwords.
Dashboard number seems wrong	Open the source page and compare filters.	Metric name, expected value, actual value, and source records checked.

Glossary

These terms are used throughout the system.

Term	Plain meaning
Role	The type of access a user has, such as Admin, Pastor, Finance Team, Ministry Leader, or Member.
Permission	A specific allowed action, such as reading, creating, updating, deleting, inviting, approving, or requesting.
Scope	The assigned area a leader can manage, such as one ministry, one cell group, or one member group.
Group	A member grouping such as YA, Men, or Women.
Cell Group	A smaller care group such as Cell Group 11.
Ministry	A service team or ministry roster such as Choir.
Unassign	Remove a member from a roster or group without deleting the member record.
Archive Visibility	The access level of a document: public, restricted, or confidential.
Service RSVP	A member response to an upcoming service, such as attending, not attending, or undecided.
Event Registration	A member or attendee registration for an event.
Audit Log	A record of system activity for accountability and support.
Demo Data	Temporary test data that should be clearly marked and cleaned up after testing.

Source and Verification Note

This handbook is based on the current PLWM-MCC source structure, route map, role access policy, and previously implemented role behavior.

This document explains intended system use and access behavior. It does not claim that private real church records, finance totals, attendance history, or every production browser flow were independently verified in this documentation update.

- Private real-data correctness requires authorized staff validation.
- Runtime QA should still include role login tests, mobile review, form edge cases, browser console checks, and production smoke tests.
- If implementation changes later, update this manual so role access and workflow instructions stay aligned with the system.

Maintenance rule

Update this handbook after access-control, role, navigation, database, or workflow changes. Documentation should not promise capabilities the system no longer supports.
